

EF ORM :- 8.0

EF - DbContext : Microsoft. EntityFrameworkCore.

- OnConfiguring() :-> This method provides a service to configure the above DbContext class with SQL Server Provider. and also all required files to start and run this service.

GC : Garbage Collector

GC Finalize Queue

100 unit

01 | 03 | 05 | 06

| | |
|-----|-------|
| 10 | Obj 1 |
| 20 | 03 |
| 30 | 05 |
| 40 | 06 |
| 50 | |
| 60 | |
| 70 | |
| 80 | |
| 90 | |
| 100 | |

GC.Finalize()

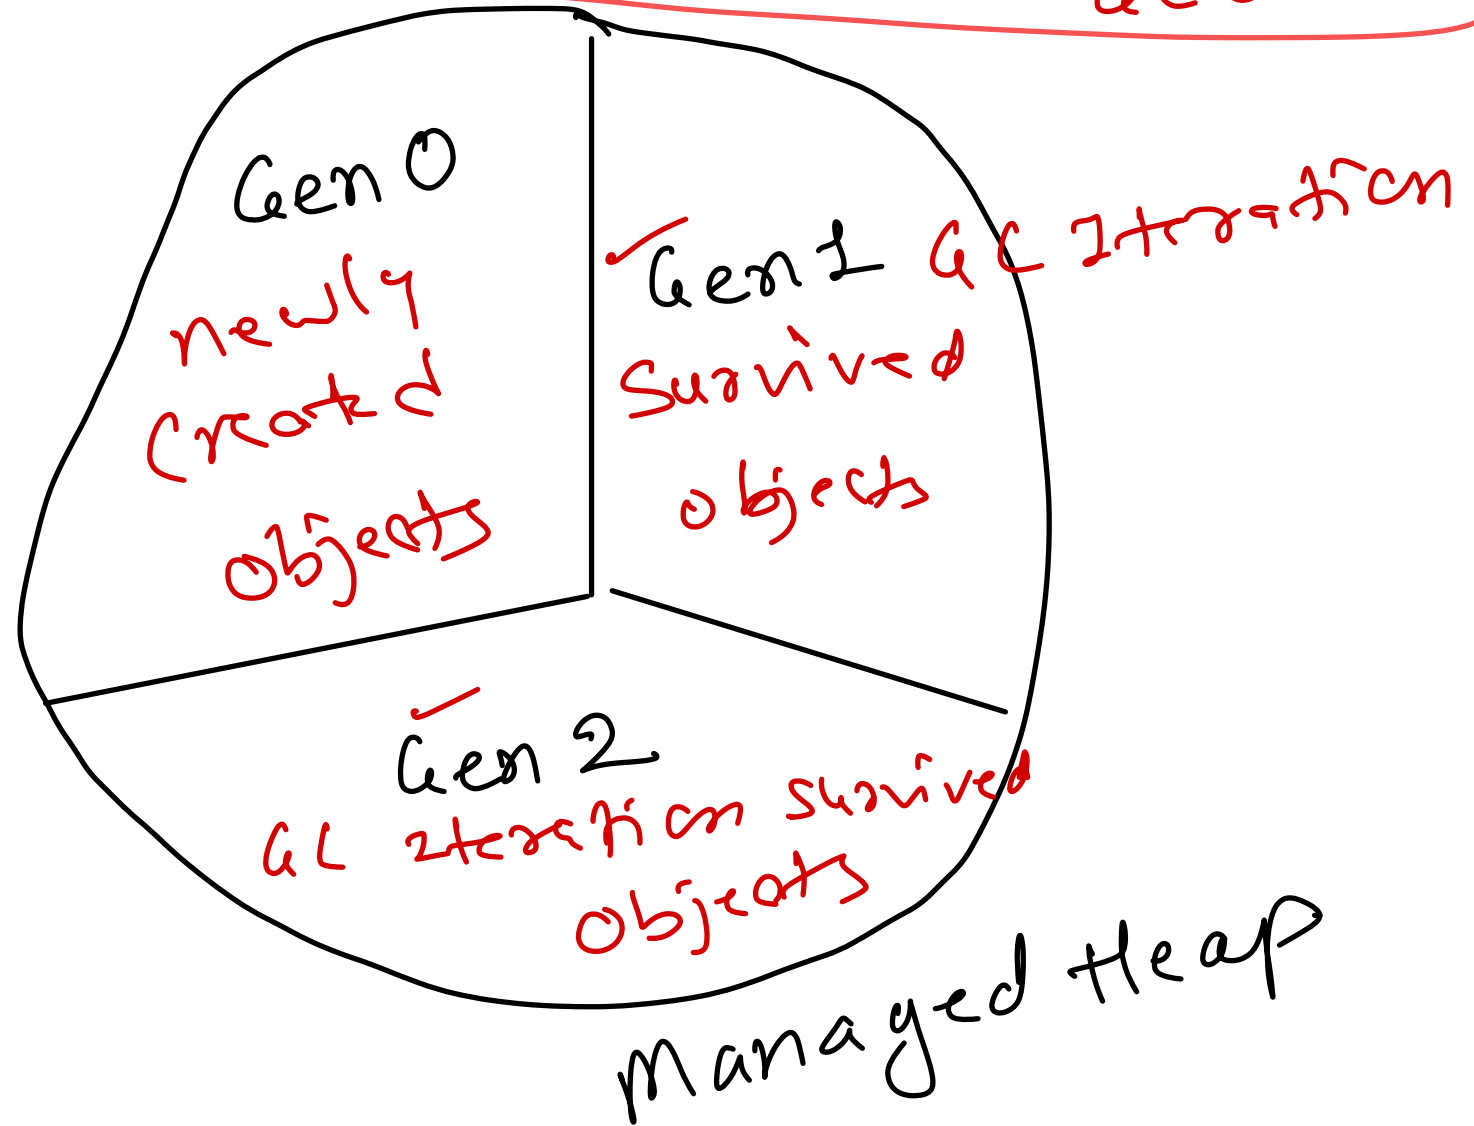

managed heap.

heap is divided into generations.

Stack

| |
|----------------------|
| 01: 1 , 2 |
| 02: 1 2 |
| 04: 1 2 |
| 06: 1 2 |
| 08: 0 |
| 1 |
| . |

Do's and Don't regarding GC:-

1. Do not write destructor (~)
2. Don't write GC. Collect() by our own.
3. Do not Declare large Objects/bulky objects
[memory 85000 bytes above]

large/bulky objects gets by birth
generation 2D = 2

GC. Collect(2);

4. Do's:- Implement IDisposable
interface and write Dispose() code

GC Queue / Finalize Queue.

✓ obj = Dispose. →

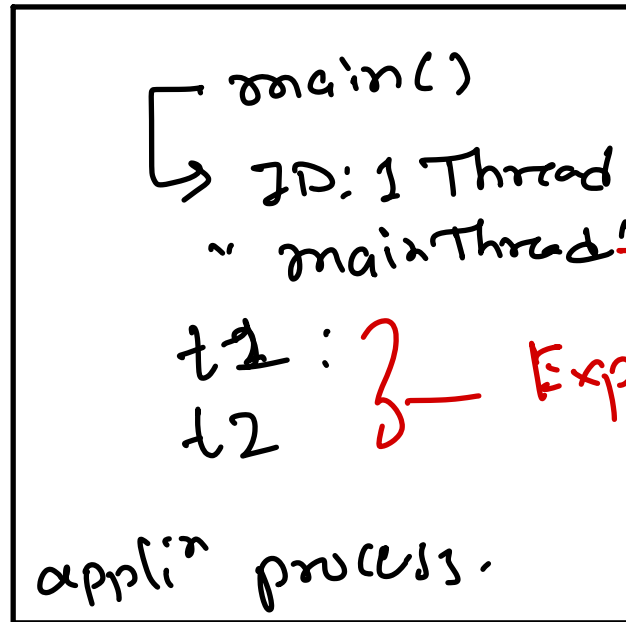

Dispose()

'
GC. SuppressFinalize(obj)
'

GC. finalize()

ID: 1 MainThread → CLR.

50 Thread Demo.dll

Implicit Thread

Explicit Thread

Thread queue.

Task is class, and it is lighter unit of Thread
